Work Summary (Developer Facing)

This sprint our team rehailed a few of the pages based on the feedback from our most recent beta testing. We fixed a bug with the sign in page where a user couldn't scroll down to the bottom of the page to the sign in button. Our beta testers also mentioned that we should display what fields on the registration page should be required to be filled, so we added new labels to show what is required. Our beta testers pointed out that the status field for the registration/edit profile page was confusing since they didn't know what to put in (married, students, etc.) so we fixed the naming on that to avoid confusion. Our beta testers also encouraged us to add a section for past jobs and current jobs so we added a work experience section where users can give detailed information and descriptions about their current and past jobs. Our team also added a feature for users to delete their own comments and replies on posts.

At this point in the project we are mainly working on visual and small functional improvements. In this vein we modified/fixed how the search bar works so it no longer registers part of a word as counting for a search, and only checks for whole words. This makes the search bar function more how you would expect. We also made it so you can comment from the front page and don't have to open the comment menu. Inside the comment menu we also added the ability to see the original post which is helpful as then you won't have to switch back and forth between the pages to leave your comment. In our previous sprint we implemented profile pictures being available in more places, and we also extended that functionality to comments and messages.

Unfinished Work

We finished the work we set for ourselves.

Completed Issues/User Stories

Code Files for Review

Please review the following code files, which were actively developed during this sprint, for quality: * [main.dart](#) * [home.dart](#) * [profile.dart](#) * [messages.dart](#) * [analytics.dart](#) *,[admin.dart](#) *[register.dart](#) * [CommentsPage.dart](#) * [public_profile.dart](#)

Retrospective Summary

Here's what went well:

We made some headway in hosting, by talking to the CCB. We have now reached out to the ITS service and are going to drop by the amazon cloud hours to see what other options we have. On the development front we made improvements to the webpage as well. We also had good communication with our client Darcie.

Here's what we'd like to improve:

Not all of our group mates are contributing equally, and we also started the sprint slightly late. In the future we would like a more even distribution of work and to start earlier in the sprint.

Here are changes we plan to implement in the next sprint:

We want to keep more in communication and make sure that everyone is contributing to their part. Also check in more often so we know that we are getting things done on time.

Sprint Meeting Retrospective:

During our retrospective we agreed that we need to start earlier on the projects and have stronger communication throughout the sprint. For our final sprint hopefully we will have a strong team dynamic and check in with each other more often.
